# THE RELATIONSHIP OF LEARNING CHOICE TACTICS AND POSITIVE REINFORCEMENT ON M.A.C BRAND SM CITY CLARK BRANCH

**Mikaela Mae R. Alcantara / Jonel T. David / Roni Rosa K. Estabillo / Marilyn R. Kim / Krisah P. Santos**

## Abstract

The purpose of the study is to determine the relationship of learning choice tactics and positive reinforcement on M.A.C brand. The study used Raosoft calculator to compute the total population and came up with the sample size of 306 respondents. A set of self-made questionnaires was administered based on the factors of learning choice tactics. Price tactic and Variety Seeking tactic got the highest overall mean rating indicating that their customers buying behavior is based on price and they need to try something new. While the factor Habit tactic got the lowest mean rating, the study also shows that there is a Weak Positive Correlation between Choice tactics and Positive Reinforcement. This means that the brand M.A.C is not as popular like other brands. Pearson's Correlation result showed that Brand Loyalty tactic gained the highest with the analysis of "Weak Positive Correlation" impact to Positive Reinforcement on M.A.C brand. However, the brand itself is less exposed to other people. Therefore, the researchers recommend focusing on customers type based on their skin type and this feature of a person which is more a sensitive problem. To get the reliability and stability, they need to focus on the real content of each product, or the ingredients of product and get the similarities based on the quality customer service, loyalty card and efforts that will result to more brand exposure and drive more revenue as a result.

*Key Terms: Learning Choice, Positive Reinforcement, Price Tactic, Variety Seeking Tactic, Habit Tactic, Brand Loyalty Tactic.*

**Introduction and Review of Related Literature**

The first use of cosmetics is usually traced back to the ancient Egyptians; many Egyptian tombs contained makeup canisters and kits. Cleopatra used lipstick that got its hue from ground carmine beetles, while other women used clay mixed with water to color their lips. Makeup are cosmetics (substance) applied to the face, body, or hair to enhance or alter appearance. It includes foundation, eye shadow, blush, lipstick and so on. It also consists of things such as lipstick, eye shadow, and powder which some women put on their faces to make themselves look more attractive or which actors use to change or improve their appearance (Edmons, 2018).

Make-Up Art Cosmetics (M.A.C) is the world's leading professional makeup authority because of its unrivalled expertise in makeup artistry.

In the early 80's, M.A.C. Beautifying agents was conceived and immediately started to bloom in the market. With Toskan as the imaginative chief and Angelo as executive of advertising, they worked out of the kitchen in the rear of one of Angelo's boutiques. Joined by Toskan's future brother by marriage and scientific expert Vic Casale, they concocted their first lipstick, that was roused by an intense pink Crayola colored pencil named Flamingo. Toksan himself announces it was the primary matte lipstick ever to look indistinguishable path on the lips from it did in the cylinder. The completion item is captured flawlessly and soon the lipstick line extended to incorporate 23 other pastel enlivened shades, just as a little scope of pencils, bases, and powders.

M.A.C. beauty care products, one of the universally adored cosmetics brands, is a similar age the same number of our dear perusers. M.A.C. is, and has consistently been, one of

the most energizing cosmetics organizations available, offering steady shock with its striking efforts and wild joint efforts.

Hyping M.A.C's. decent variety, the prime supporters picked to recruit flighty wonders to work the counters, picking representatives of each sexual orientation who regularly flaunted intense hair hues, piercings, and tattoos. M.A.C. was the principal brand in corrective history to put resources into preparing and instruction of its staff just as the client's retail location experience. Rather than pushing deals through conventional publicizing (e.g., endowments with buy, examining, and so on.), M.A.C depended on its fastidiously defined items and its over-the-top picture. The socially-focused shop took into account a wide range of sexual orientation and skin tone, and the Canadian organization was giving the substance of magnificence a genuinely necessary makeover.

According to Hoyer & MacInnis (2008), Learning Choice Tactics is a simple rule of thumb used to make low-effort decisions. The choice tactics were often used depending on the product category which the costumers preferred. Shoppers can build up a decision strategies for each rehash buy, low-elaboration choice, easy dynamic in the item or administration classification.

Choice tactics used in decision making can be either cognitively based (performance, habit, brand loyalty, price, normative) or based on feelings (affect, variety seeking, impulse). These tactics are learned over rehash buy events through a procedure called operant molding.

At the point when clients were asked on how they settled on their decisions, a few significant classes of strategies developed, including value strategies (it's the least expensive or it's at a bargain), influence strategies (I like it), execution strategies (it clean garments better), and regulating strategies (my mom got it), propensity strategies (I purchase a similar brand I

purchased last time), brand-steadfastness strategies (I purchase a similar brand for which I have a solid exhibition), and assortment looking for strategies (I have to take a stab at something other than what's expected).

According to Hoyer & MacInnis (2008), purchasers are well on the way to utilize cost related strategies, for example, purchasing the least expensive brand, purchasing the brand at a bargain, or utilizing a coupon when they see barely any distinctions among brands and when they have low contribution with the brands in the thought set. In spite of the fact that cost is a basic factor in numerous choices, customers by and large don't recollect value data, in any event, for a brand they have quite recently chosen. This response happens on the grounds that value data is consistently accessible in the store, so purchasers have little inspiration to recall it. Note that purchasers who stress over losing cash are progressively worried about cost, while the individuals who are delicate to gains see brand includes just as value." Simplifying choice heuristics that depend on cost.

According to Alton (2018), pricing is one of the most significant parts of maintaining a fruitful business, yet most business people give it next to no idea or examination. The Problematic Pricing Plague If you consider it, the cost of the items and administrations you sell majorly affects each feature of your business. On the off chance that costs are excessively low, you'll presumably observe fabulous deals volume, yet you won't have the option to make enough benefit to keep the lights on. In the event that costs are excessively high, you may have a hearty per-unit overall revenue, however you're just going to sell a small amount of the volume that you have to sell so as to pay your representatives' pay rates. The cost of an item isn't only a number.

According to Gencler (2017), pricing is significantly more than undermining contender costs and cost coordinating. In the event that you know how to utilize serious insight innovation and approach your rivals in a diagnostic and organized manner, you have a high opportunity to outflank them. In this post, we are going to share six awesome techniques to assist you with deserting the opposition far for you.

According to Hoyer & MacInnis (2008), affect-related tactics utilize a type of classification based handling.'" at the end of the day, we partner brands with worldwide full of feeling assessments we review from memory when settling on a decision, a procedure called influence referral or the "What is my opinion about it?" heuristic. For example, when we hear the name Starbucks, we may connect it with general sentiments of bliss, and we may choose to get espresso there dependent on these emotions instead of on a point by point assessment of Starbucks. In one investigation, purchasers picking between a sound treat and a less solid chocolate cake picked the pastry related with the best effect (the cake) whenever they had little chance to consider the decision. At the point when they had more opportunity to think, they picked the more advantageous treat, a response that proposes that influence referral is to a greater extent a factor under low preparing exertion. Another investigation found that positive sentiments toward advancements can likewise move not exclusively to the elevated item however to irrelevant items too.

According to Vizcaino (2018), affect tactics senior supervisors generally use window signs to brighten their stores and, all the more critically, to impart store- related data to their clients. This exploration researches the job window signs play in impacting shoppers' perspectives and store support goals. Observational proof from two examinations (information from a real- life store condition and from a trial setting) demonstrates that window signs

produce positive deductions to customers about the store picture and the store advancement esteem, which at last impact shoppers' support goals. Moreover, this investigation proposes and tests a model recommending that window signs speak to a demonstrative prompt from which customers induce a feeling of spot personality. The outcomes show that place personality halfway intercedes the connection between customers' mentality towards window signs and buyers' store support expectations.

According to Hoyer & MacInnis (2008), performance-related Tactic is at the point when the result of the utilization procedure is uplifting feedback, purchasers are probably going to utilize execution related strategies to settle on their decisions. These strategies can speak to a general assessment (works the best) or spotlight on a particular trait or advantage (gets teeth whiter, tastes better, or speedier assistance). Fulfillment is the key: Satisfied customers are probably going to build up a positive assessment of the brand or administration and repurchase it dependent on its highlights. Strategies dependent on advantages, highlights, or assessments of the brand.

According to Fallon (2017), performance pretty much every business has a few methods for following its own presentation - deals numbers, online life commitment, advertising leads, and so forth. It's the most ideal approach to perceive how you're really doing contrasted with where you ought to or need to be. The equivalent goes for your representatives. A conventional presentation the board program enables directors and their representatives to agree on desires, objectives and profession progress, and how those things line up with the organization's vision.

According to Hoyer & MacInnis (2008), for normative tactics once in a while other can impact buyers' low-elaboration dynamic. For example, a school first year recruit may purchase the brand of clothing cleanser that his mom utilizes at home; a sophomore may purchase

garments that her companions like. Our utilization of such regularizing decision strategies can result from (1) direct impact; in which others attempt to control us; (2) vicarious perception, in which we watch others to manage our conduct; and (3) roundabout impact, in which we are worried about the assessments of others. Standardizing strategies are especially normal among unpracticed buyers who have little information. Online correspondence can build the significance of standardizing impact in dynamic since buyers can get in touch with one another so without any problem. In the event that regularizing strategies are especially clear in an item or administration classification, organizations can accentuate these inspirations in publicizing. Advertisers can likewise endeavor to animate verbal correspondence, for example, Low-elaboration dynamic that depends on others' assessments.

According to Nolan (2014), normative social impact additionally influences the manner in which we purchase and shop. This hypothesis of similarity can impact the manner in which publicists and advertisers educate us concerning their brands. On the off chance that you work in promoting or advertising, it is imperative to comprehend the conduct of purchasers and how they will react to your advertisements, so you can make a showcasing plan for your business that is advantageous to you and your clients.

According to Hoyer & MacInnis (2008), people are animals of propensity. When we locate a helpful method of getting things done, we will in general recurrent it without truly thinking following a similar schedule each morning, driving a similar course to work or school, shopping at similar stores. We do these things since they make life less difficult and increasingly sensible.

At times buyers' securing, utilization, and attitude choices depend on propensity, as well. Propensity is one of the least difficult, most easy kinds of customer dynamic, described by (1)

practically no data chasing and (2) next to zero assessment of options. In any case, propensity doesn't require a solid inclination for a contribution; rather, it essentially includes dreary conduct and normal buy." Decision making dependent on propensity likewise decreases hazard." Consumers realize the brand will fulfill their necessities since they have gotten it various occasions before. Exploration bolsters the impact of propensity, on low-valued, much of the time bought items. However, the more extended customers hold on to make their next buy in an item classification, the more uncertain they ate to purchase the brand that they constantly buy." Doing the same thing time after time.

According to Lindsay (2014), habit is a daily routine to the brands we purchase, people want the disentangled dynamic that adjustment gives. The absence of acknowledgment of propensity as a driving impact in all of advertising could clarify why so much promoting baffles where ROI is concerned. In the event that your image's development includes changing individuals from a contender's item to yours, what you are truly requesting that they do is change their propensity.

According to Hoyer & MacInnis (2008), brand loyalty occurs when consumers make a conscious evaluation that a brand or service satisfies their needs to a greater extent than others do and choose to purchase a similar brand more than once therefore. Basically, brand dedication results from uplifting feedback of a presentation related decision strategy. Brand steadfastness can likewise create when a buyer gets capable in utilizing a specific contribution, for example, a particular brand of cash the executives programming. Confronted with the expectation to learn and adapt expected to change to an alternate brand of programming, the shopper will in general remain brand faithful in view of psychological lock-in. Buying the same brand repeatedly because of a strong preference for it.

According to Kopp (2019), brand loyalty is the positive association consumers attach to a particular product or brand. Customers that exhibit brand loyalty are devoted to a product or service, which is demonstrated by their repeat purchases despite competitor's efforts to lure them away.

According to Rouse, and Shadley (2019), brand loyalty is a passionate bind to a brand that drives shoppers to proceed and extend their buys for items from a similar brand. Associations will utilize brand steadfastness to drive extra buys both with current items and across brand expansions. Brand unwaveringness makes a conduct for a client not exclusively to perform rehash buys for an item yet in addition buy extra items from a similar organization. Brand steadfastness likewise makes a bond that hinders a client from purchasing items from another brand.

According to Hoyer & MacInnis (2008), decision making based on variety-seeking needs another normal purchaser decision strategy in low-exertion circumstances is to have a go at something other than what is expected, a marvel called assortment chasing. A customer may consistently purchase Starbucks espresso however one day have a desire to attempt Dunkin' Donuts espresso—at that point come back to Starbucks for later espresso buys. Buyers look for assortment for two significant reasons: satiation and fatigue. In the event that you had a similar nourishment for supper consistently or observed just a single film again and again, satiation would happen, driving you to accomplish something else. Shopper choices that happen more than once can get repetitive. This outcome clarifies why a few buyers switch for change, despite the fact that they would have gotten progressively quick satisfaction from rehashing their standard decision. Another explanation purchaser look for assortment in open circumstances is on the grounds that they envision that others will assess their choice all the more decidedly.

Purchasers may take part in assortment looking for in light of the fact that they see the expenses of changing to another item to be lower than do buyers who are not assortment searchers.

According to Adomaviclus, Bockstedt, and Curley (2015), variety seeking prior research with consumable goods has consistently found that consumers have a preference for greater variety when selecting items simultaneously as a bundle, rather than as a sequential series of individual decisions.

According to Hoyer & MacInnis (2008), positive reinforcement as a rule originates from a sentiment of fulfillment that happens when we as purchasers see that our needs have been enough met. The support expands the likelihood that we will buy a similar brand once more. After purchasers apply one of the seven fundamental kinds of strategies to settle on a decision, they take the brand home and use it. During utilization, they can assess the brand, an activity that outcomes in one of three essential results: Reinforcement (fulfillment prompting an uplifting mentality and repurchase).

Reinforcement alludes to a boost which follows and is dependent upon a conduct and builds the likelihood of a conduct being rehashed (Smith, 2017). The least difficult method of conceptualizing encouraging feedback is that something wonderful is 'included' when a particular activity is performed (Cherry, 2018).

Positive reinforcement is a part of the build of Operant Conditioning created by B. F. Skinner (Cherry, 2018). Skinner contemplated rodents, and he found that if the rodents reliably squeezed a bar which controlled food to the rodent, the rodent would press the bar increasingly more so as to get the food reward. Like those rodents, if individuals locate a specific conduct fulfilling, all things considered, they will rehash this conduct.

Statement of the Problem

The research aimed to distinguish the relationship of learning choice tactics and positive reinforcement on M.A.C brand through the following questions:

1. How may the factors of learning choice tactics be described in terms of:
    a. Price tactic
    b. Affect tactic
    c. Performance-related tactic
    d. Normative tactic
    e. Habit tactic
    f. Brand loyalty tactic
    g. Variety seeking tactic
2. How may the respondent's positive reinforcement be described in general?
3. Is there a huge relationship between learning choice tactics and positive reinforcement?

Hypotheses of the Study

**$H_1$**: There is no relationship between price tactics and positive reinforcement.

**$H_2$**: There is no relationship between affect tactics and positive reinforcement.

**$H_3$**: There is no relationship between performance-related tactics and positive reinforcement.

**$H_4$**: There is no relationship between normative tactics and positive reinforcement

**$H_5$**: There is no relationship between habit and positive reinforcement.

**$H_6$**: There is no relationship between brand loyalty and positive reinforcement

**$H_7$**: There is no relationship between variety seeking and positive reinforcement.

LEARNING CHOICE TACTICS

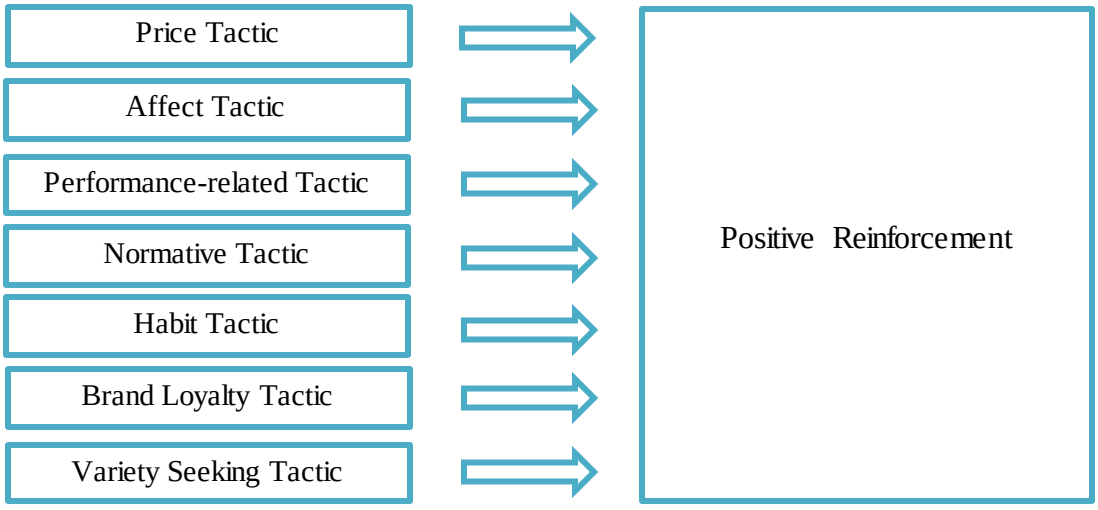

*Figure 1.1 Conceptual Framework*

The framework above illustrates the factors of learning choice tactics which are price tactic, affect tactic, performance-related tactic, normative tactic, habit tactic, brand loyalty, and variety seeking tactics to determine their significant and relationship with positive reinforcement.

Significance of the Study

This study is aimed to understand more about the choice tactics in purchasing a cosmetic product based on a low-effort decision making and may be used as a significant basis for knowing more about potential customers of different cosmetic product. This study may benefit the following:

To M.A.C. Cosmetics

This study may be used as significant basis to help company improve and satisfy their customers. This also help benefit from the repeat purchase of customers and to maintain the loyalty through proper communication.

To all Businesses

This study may guide all the businesses to improve their strategy and enhance their business knowledge on how choice tactics are applied and used to generate ideas.

To the Customers/Consumers

This study may guide the customers using the learning choice tactics to purchase a product and to increase better purchasing experience and awareness of the customer.

To the future Researchers

This study will fill in as a kind of perspective and rule for the future analysts and may fill in as a wellspring of data.

This study also provide data for further study on the impact of learning choice tactics towards reinforcement.

Scope and Limitation

The scope of this research is focused only the factors of choice tactics affecting customer purchasing a product. Furthermore, the participants of this study are the customers buying at M.A.C cosmetics, SM Clark branch.

The results obtained from this study are limited only to the whole customers of M.A.C cosmetics. All factors employed in this study are enough to describe the future direction for the M.A.C company strategy. There may be some other variables which can play a significant role in factors affecting customers choice that leads to positive reinforcement only, but they may not covered in this research.

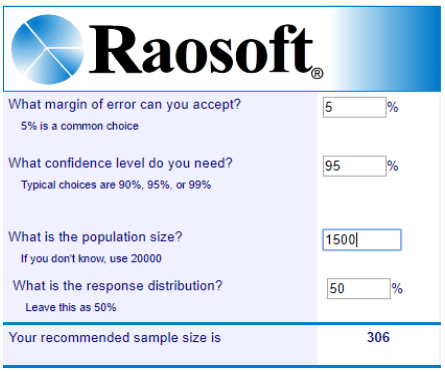

## METHOD

### Research Design

The research employed a descriptive method in order to know the role of learning choice tactics as factors in the reinforcement of M.A.C cosmetics brand. Quantitative research aim is to determine the connection between the free and ward factors. It is either descriptive or experimental and it establishes only associations between variables. An experiment research establishes results casually.

### Participants of the Study

The survey questionnaire was distributed to the 306 customers in M.A.C brand in SM City Clark. Through this observation, the researchers determined how the customer will response regarding price tactic, affect tactic, performance-related tactic, normative tactics, habit tactics, brand loyalty tactic and variety seeking factors toward positive reinforcement of M.A.C brand company. The researchers targeted 306 respondents, calculated respondents using Raosoft Calculator with a confidence level of 95%, a margin of error of 0.5%, a Population Proportion of 50% and an estimated of 1500 population.

http://www.raosoft.com/samplesize.html

Research Instruments

The research instrument is a self-made survey questionnaire to gather the needed data from the M.A.C cosmetics customers. The researchers distributed the questionnaire to the customers of M.A.C cosmetics brand for data gathering. The researchers aimed to identify the factors on the perception of the customers' learning choice tactics through the survey, the questions regarding their perception of the company by putting a check in the survey form.

Data Gathering Procedure

The researcher's self-made questionnaire to be served to possible respondents. To test the unwavering quality of the survey, researchers will be directing a pilot testing for M.A.C beautifying agents at SM City Clark utilizing 40 questionnaires. Before the survey, the researchers first secured a permit from the store manager. After given the permission, the questionnaire was distributed, and the data were collected for checking and tallying.

Data Processing and Analysis Procedure

A Likert Scale is used to calculate the data. The Likert Scale is described thus: 1 strongly disagree, very un-important, highly dissatisfied, 2 disagree, un-important, dissatisfied, 3 agree, important, satisfied and 4 strongly agree, very important, highly satisfied.

Mean Rating Scale

The gathered data had undergone statistical process. Mean Rating and Correlation is utilized to determine the weighted mean rating of each factor of learning choice tactics and provide findings if there is a relationship between learning choices and reinforcement.

Table 1. Mean Rating Table

| Value Scale | Mean Range | Descriptive Rating |
|---|---|---|
| 4 | 3.25 – 4.00 | Strongly Agree |
| 3 | 2.50 – 3.24 | Agree |
| 2 | 1.75 – 2.49 | Disagree |
| 1 | 1.00 – 1.74 | Strongly Disagree |

Pearson Correlation

According to Black (2001), this tool is utilized to determine the measure of the strength of relatedness of two variables. The coefficient values can range from +10 to -1, where +1 indicates a perfect positive relationship, while -1 indicates a perfect negative relationship, and 0 indicates no relationship exists. The strength of correlation is shown in table 2.

Table 2. Strength of Correlation

| p-value = | |
|---|---|
| 1.00 | Perfect Correlation |
| +.80 < +1.0 | Very Strong Positive Correlation |
| +.60 < +.80 | Strong Positive Correlation |
| +.50 < +.60 | Moderate Positive Correlation |
| +.20 < +.50 | Weak Positive Correlation |
| +.01 < +.20 | Very Weak Positive Correlation |
| 0 | No Correlation |

## RESULTS AND DISCUSSION

Table 3 shows that the most noteworthy mean rating of 3.45 is "M.A.C is economical than the other brands" with the descriptive rating of "Strongly Agree". Then again, the most reduced mean rating got 3.38 with the statement "I buy M.A.C cosmetics because of freebies, gift certificate and buy one take one promo" with the descriptive rating of "Strongly Agree". Overall, the factor Price tactic has acquired an all-out normal of 3.42 with the understanding of "Strongly Agree".

Table 3 - *The relationship of Learning Choice Tactics and Positive Reinforcement – Price Tactic*

| Price Tactic | Mean Rating | Descriptive Rating |
|---|---|---|
| 1.Despite the price, M.A.C cosmetics is a quality product. | 3.42 | Strongly Agree |
| 2.M.A.C is economical than the other brands. | 3.45 | Strongly Agree |
| 3.M.A.C cosmetics pricing policy is based in product value. | 3.44 | Strongly Agree |
| 4.I buy M.A.C cosmetics always when on sale. | 3.43 | Strongly Agree |
| 5.I buy M.A.C cosmetics because of freebies, gift certificate and buy one take one promo. | 3.38 | Strongly Agree |
| TOTAL AVERAGE | 3.42 | Strongly Agree |

Table 4 shows that the most noteworthy mean rating of 3.42 is shown in the statement "I'm rooting for M.A.C cosmetics because I feel better than I expected" with the descriptive rating of "Strongly Agree". Then again, the most reduced mean rating got 3.26 is reflected in the statement "I am addicted to M.A.C cosmetics' products" with the descriptive rating of "Strongly Agree". Overall, the factor Affect tactic has acquired an all-out normal of 3.36 with the understanding of "Strongly Agree".

Table 4 - *The relationship of Learning Choice Tactics and Positive Reinforcement – Affect Tactic*

| Affect Tactic | Mean Rating | Descriptive Rating |
|---|---|---|
| 1.I am addicted to M.A.C cosmetics' products. | 3.26 | Strongly Agree |
| 2.At times I will select a M.A.C brand because of its quality. | 3.35 | Strongly Agree |
| 3.M.A.C brand makes my face more beautiful and more attractive. | 3.38 | Strongly Agree |
| 4.M.A.C brand helps me feel comfortable. | 3.40 | Strongly Agree |
| 5.Im rooting for M.A.C cosmetics because I feel better than I expected. | 3.42 | Strongly Agree |
| TOTAL AVERAGE | 3.36 | Strongly Agree |

Table 5 shows that the most noteworthy mean rating of 3.46 is revealed in the statement "I would definitely buy M.A.C because of its good customer service" with the descriptive rating of "Strongly Agree". Then again, the most reduced mean rating got 3.33 is reflected in the statement "The M.A.C products are safe from lead hazards" with the descriptive rating of "Strongly Agree". Overall, the factor Performance-related tactic has acquired an all-out normal of 3.39 with the understanding of "Strongly Agree".

Table 5 - *The relationship of Learning Choice Tactics and Positive Reinforcement – Performance-related Tactic*

| **Performance-related tactic** | **Mean Rating** | **Descriptive Rating** |
|---|---|---|
| 1.The M.A.C products are safe from lead hazards. | 3.33 | Strongly Agree |
| 2.The M.A.C are made to last longer. | 3.37 | Strongly Agree |
| 3.The M.A.C products is a reliable product. | 3.37 | Strongly Agree |
| 4.I would definitely buy M.A.C because of its good customer service. | 3.46 | Strongly Agree |
| 5.I would definitely buy M.A.C products because it is tested and proven. | 3.43 | Strongly Agree |
| TOTAL AVERAGE | 3.39 | Strongly Agree |

Table 6 shows that the most noteworthy mean rating of 3.46 is revealed in the statement "M.A.C cosmetics are highly recommended, because they are the best products" with the descriptive rating of "Strongly Agree". Then again, the most reduced mean rating got 3.28 is reflected in the statement "I am influenced by their social media advertisement" with the descriptive rating of "Strongly Agree". Overall, the factor Normative tactic has acquired an all-out normal of 3.36 with the understanding of "Strongly Agree".

Table 6 - *The relationship of Learning Choice Tactics and Positive Reinforcement – Normative Tactic*

| Normative tactic | Mean Rating | Descriptive Rating |
|---|---|---|
| 1.I am influenced by their social media advertisement. | 3.28 | Strongly Agree |
| 2.I am influenced by their celebrity endorser. | 3.31 | Strongly Agree |
| 3.My friends are telling me to buy M.A.C cosmetics because it is a high-end and a famous brand | 3.33 | Strongly Agree |
| 4.M.A.C cosmetics are highly recommended, because they are the best products. | 3.46 | Strongly Agree |
| 5.I listen to the opinions of my friends before I purchase M.A.C brands | 3.41 | Strongly Agree |
| TOTAL AVERAGE | 3.36 | Strongly Agree |

Table 7 shows that most noteworthy mean rating of 3.29 is revealed in the statement "I often buy M.A.C to satisfy my needs" with the descriptive rating of "Strongly Agree". Then again, the most reduced mean rating got 3.24 is reflected in the statement "I often buy M.A.C products weekly or monthly" with the descriptive rating of "Agree". Overall, the factor Habit tactic has acquired an all-out normal of 3.26 with the understanding of "Strongly Agree".

Table 7 - *The relationship of Learning Choice Tactics and Positive Reinforcement – Habit Tactic*

| Habit tactic | Mean Rating | Descriptive Rating |
|---|---|---|
| 1.I often buy M.A.C cosmetics if there is a new release product. | 3.26 | Strongly Agree |
| 2.I often buy M.A.C to satisfy my needs. | 3.29 | Strongly Agree |
| 3.I often read information about M.A.C if there is a new brand. | 3.26 | Strongly Agree |
| 4.I often buy M.A.C products every time I pass by at malls | 3.25 | Strongly Agree |
| 5.I often buy M.A.C products weekly or monthly. | 3.24 | Agree |
| TOTAL AVERAGE | 3.26 | Strongly Agree |

Table 8 shows that the most noteworthy mean rating of 3.39 is revealed in the statement "I buy M.A.C products because they have all the variety of colors that I need" with the descriptive rating of Strongly Agree. Then again, the most reduced mean rating got 3.27 is described in the statement "I have been using M.A.C for years and never wanted any brand" with the descriptive rating of Strongly Agree. Overall, the factor Brand Loyalty tactic has acquired an all-out normal of 3.33 with the understanding of "Strongly Agree".

Table 8 - *The relationship of Learning Choice Tactics and Positive Reinforcement – Brand Loyalty Tactic*

| Brand Loyalty tactic | Mean Rating | Descriptive Rating |
|---|---|---|
| 1.I have been using M.A.C for years and never wanted any brand. | 3.27 | Strongly Agree |
| 2.I buy M.A.C products because of a strong preference for it. | 3.32 | Strongly Agree |
| 3.I buy M.A.C products because of their strong commitment customers. | 3.28 | Strongly Agree |
| 4.I buy M.A.C products because they have all the variety of colors that I need. | 3.39 | Strongly Agree |
| 5.I buy M.A.C products because it suits to my sensitive skin. | 3.38 | Strongly Agree |
| TOTAL AVERAGE | 3.33 | Strongly Agree |

Table 9 shows that the most noteworthy mean rating of 3.48 is revealed in the statement "I buy M.A.C products because the textures and smell of their foundation is different from other brands" with the descriptive rating of "Strongly Agree". Then again, the most reduced mean rating got 3.36 is described in the statement "I buy M.A.C cosmetics to experience its different shades of lipstick" with the descriptive rating of "Strongly Agree". Overall, the factor Variety Seeking tactic has acquired an all-out normal of 3.42 with the understanding of "Strongly Agree".

Table 9 - *The relationship of Learning Choice Tactics and Positive Reinforcement – Variety Seeking Tactic*

| Variety Seeking tactic | Mean Rating | Descriptive Rating |
|---|---|---|
| 1.I buy M.A.C cosmetics to experience its different shades of lipstick. | 3.36 | Strongly Agree |
| 2.I enjoy buying new different products of M.A.C cosmetics for variety in my purchases | 3.42 | Strongly Agree |
| 3.I buy M.A.C products because they have a nice variety of blush-on that I look for | 3.41 | Strongly Agree |
| 4.I buy M.A.C products because the textures and smell of their foundation is different from other brands. | 3.48 | Strongly Agree |
| 5.I buy M.A.C products because they have all the shades of foundation that suits my skin. | 3.44 | Strongly Agree |
| TOTAL AVERAGE | 3.42 | Strongly Agree |

Table 10 shows that the most noteworthy mean rating of 3.52 is reflected in the statement "I would definitely buy M.A.C cosmetics because its suits my personality" with the descriptive rating of "Strongly Agree". Then again, the most reduced mean raring got 3.40 is described in the statement "I would definitely buy M.A.C cosmetics because of the high quality and textures" with the descriptive rating of "Strongly Agree". Overall, Positive Reinforcement has acquired an all-out normal of 3.46 with the understanding of "Strongly Agree".

Table 10 - *The relationship of Learning Choice Tactics and Positive Reinforcement – Positive Reinforcement*

| Positive Reinforcement | Mean Rating | Descriptive Rating |
|---|---|---|
| 1.I would definitely buy M.A.C cosmetics because of the high quality and textures. | 3.40 | Strongly Agree |
| 2.M.A.C cosmetics ingredients are very important for your long-term skin beauty mark. | 3.51 | Strongly Agree |
| 3.M.A.C products are the brand I can trust because they are economical and have quality selection of colors. | 3.46 | Strongly Agree |

*Correlation of Learning Choice Tactics and Positive Reinforcement*

Table 11 show that Price tactic has a significant relationship of positive reinforcement at p-value of .001 which is less than the alpha level of 0.05 (<0.05). Hence, H1 is rejected. Moreover, the connection between the autonomous and ward variable is depicted as a Weak Positive relationship given the r-value of 0.408.

*Table 11 – Price Tactic*

| Choice Tactics | Pearson's r | p-value | Analysis | Decision |
|---|---|---|---|---|
| Price Tactic | 0.408 | .001 | Weak Positive Correlation | Reject $H_1$ |

Table 12 show that Affect tactic has a significant relationship with positive reinforcement at p-value of .001 which is less than the alpha level of 0.05 (<0.05). Hence, H2 is rejected. Moreover, the connection between the autonomous and ward variable is depicted as a Weak Positive relationship given the r-value of 0.414.

*Table 12 – Affect Tactic*

| Choice Tactics | Pearson's r | p-value | Analysis | Decision |
|---|---|---|---|---|
| Affect Tactic | 0.414 | .001 | Weak Positive Correlation | Reject $H_2$ |

Table 13 show that Performance tactic has a significant relationship with positive reinforcement at p-value of .001 which is less than the alpha level of 0.05 (<0.05). Hence, H3 is rejected. Moreover, the connection between the autonomous and ward variable is depicted as a Weak Positive relationship given the r-value of 0.320.

*Table 13 – Performance-related Tactic*

| Choice Tactics | Pearson's r | p-value | Analysis | Decision |
|---|---|---|---|---|
| Performance-related Tactic | 0.320 | .001 | Weak Positive Correlation | Reject $H_3$ |

Table 14 show that Normative tactic has a significant relationship with positive reinforcement at p-value of .001 which is less than the alpha level of 0.05 (<0.05). Hence, H4 is rejected. Moreover, the connection between the autonomous and ward variable is depicted as a Weak Positive relationship given the r-value of 0.388.

*Table 14 – Normative Tactic*

| Choice Tactics | Pearson's r | p-value | Analysis | Decision |
|---|---|---|---|---|
| Normative Tactic | 0.388 | .001 | Weak Positive Correlation | Reject $H_4$ |

Table 15 show that Habit tactic has a significant relationship with positive reinforcement at p-value of .001 which is less than the alpha level of 0.05 (<0.05). Hence, H5 is rejected. Moreover, the connection between the autonomous and ward variable is depicted as a Weak Positive relationship given the r-value of 0.244.

*Table 15 – Habit Tactic*

| Choice Tactics | Pearson's r | p-value | Analysis | Decision |
|---|---|---|---|---|
| Habit Tactic | 0.244 | .001 | Weak Positive Correlation | Reject $H_5$ |

Table 16 show that Brand loyalty tactic has a significant relationship with positive reinforcement at p-value of .001 which is less than the alpha level of 0.05 (<0.05). Hence, H6 is rejected. Moreover, the connection between the autonomous and ward variable is depicted as a Weak Positive relationship given the r-value of 0.475.

*Table 16 – Brand Loyalty Tactic*

| Choice Tactics | Pearson's r | p-value | Analysis | Decision |
|---|---|---|---|---|
| Brand Loyalty Tactic | 0.475 | .001 | Weak Positive Correlation | Reject $H_6$ |

Table 17 show that Variety seeking tactic has a significant relationship with positive reinforcement at p-value of .001 which is less than the alpha level of 0.05 (<0.05). Hence, H7 is rejected. Moreover, the connection between the autonomous and ward variable is depicted as a Weak Positive relationship given the r-value of 0.443.

*Table 17 – Variety Seeking Tactic*

| Choice Tactics | Pearson's r | p-value | Analysis | Decision |
|---|---|---|---|---|
| Variety Seeking | 0.443 | .001 | Weak Positive Correlation | Reject $H_7$ |

## Conclusion

The study revealed that Price and Variety Seeking as factors of Learning Choice Tactics obtained the highest grand mean of 3.42 among other factors which were verbally interpreted as "Strongly Agee".

In addition, respondents strongly agreed with statements that "MAC is economical than the other brands" with mean rating of 3.45 and "I buy MAC products because the textures and smell of foundation is different from other brands" with mean rating of 3.48 for factors - price and variety seeking tactics respectively.

Meanwhile, Price factor reflecting statements "I buy MAC cosmetics because of freebies, gift certificates and buy one take one promo" and Variety Seeking statement "I buy MAC cosmetics to experience its different shades of lipsticks" were verbally interpreted by respondents as "strongly agree" but obtained the lowest mean rating among other factors of 3.38 and 3.36 respectively.

Furthermore, Habit tactics as factors of learning choice tactics obtained the lowest grand mean of 3.26 among other factors which were verbally interpreted as "strongly agree". Respondents strongly agreed on statement that "I often buy M.A.C to satisfy my needs" with mean rating of 3.29, while the statement "I often buy M.A.C products weekly or monthly" obtained the mean rating of 3.24 with descriptive rating of agree.

However, it is revealed that brand loyalty obtained the strongest correlated factors of Learning choice tactics to positive reinforcement with a Pearson’s r of 0.475 and p-value of 0.001 which were interpreted as Weak positive correlation. While the Habit tactic gained the weakest correlated factors to positive reinforcement with a Pearson’s r of 0.244 and p-value of 0.001 which were interpreted as Weak positive correlation.

Lastly, the overall correlation of Learning choice tactics and positive reinforcement obtained a Weak positive correlation.

## Recommendation

M.A.C is the world's leading professional makeup authority because of its unrivalled expertise in makeup artistry. M.A.C being one of the leader in the market, must continue to innovate by releasing new products. Since the study revealed that despite the strength of the brand, M.A.C is not the only cosmetics who leads in the market. The researchers recommend the following:

M.A.C cosmetics can provide to have devotion programs which are planned for satisfying the ordinary clients and offering them impetuses to guarantee their steadfastness. Extraordinary limits ought to be given to standard clients as this would make their experience important as well as urge them to impart the news to their loved ones. This aides in making positive informal exchange for the organization. From all the research methods that were conducted during the elaboration of this research clearly came out that consumers also notice the product packaging and it has an influence on them. M.A.C brand also need to used packaging that will attract to the consumers. And they should provide an eco-friendly product to the consumers that fits to their wants and needs.

**Definition of Terms**

**Choice Tactics** – Simple rules of thumbs used to make low-effort decisions.

**Price Tactic** – Simplifying decision heuristics that are based on price.

**Affect Tactic** – Tactics based on feelings.

**Performance-related Tactic** – Tactics based on benefits, features, or evaluation of the brand.

**Normative Tactic** – Low-elaboration decision making that is based on others' opinions.

**Habit Tactic** – Doing the same thing time after time.

**Brand Loyalty Tactic** – Buying the same brand repeatedly because of a strong preference for it.

**Variety Seeking Tactic** – Trying something different.

**Positive Reinforcement** – Generally originates from a sentiment of fulfillment that happens when we as purchasers see that our needs have been satisfactorily met.

## SYSTEMS PLUS COLLEGE FOUNDATION

APPENDIX A – SURVEY QUESTIONNAIRES

| LEARNING CHOICE TACTICS | | | | |
|---|---|---|---|---|
| Dear Respondents,<br>We are fourth year students at Systems Plus College Foundation taking Bachelor of Science in Business Administration major in Marketing Management. We are conducting a research entitled: **The Relationship of Learning Choice Tactics and Positive Reinforcement on M.A.C Brand.**<br>Directions:<br>Please read all the questions carefully. The survey has been designed to facilitate easy answer. The answer requires either a ✓ or to indicate your appropriate responses. All surveys are confidential. Only the researchers see and processes the questionnaire.<br>*Please rate the question below, in your opinion, from 1-Strongly Disagree, 2-Dissagree, 3-Agree, 4-Strongly Agree. | | | | |
| **M.A.C (Make-up Art Cosmetics) BRAND** | | | | |
| | (1) | (2) | (3) | (4) |
| **PRICE TACTIC** | | | | |
| 1.Despite the price, M.A.C cosmetics is a quality product. | | | | |
| 2.M.A.C is economical than the other brands. | | | | |
| 3.M.A.C products pricing policy are based in product value. | | | | |
| 4.I buy M.A.C products always when on sale. | | | | |
| 5.I buy M.A.C products because of the freebies, gift certificate and buy one take one promo. | | | | |
| **AFFECT TACTIC** | | | | |
| 1.I am addicted to M.A.C beautifying agents' items. | | | | |
| 2.At times I will select a M.A.C brand because of its quality. | | | | |
| 3.M.A.C brand makes my face more beautiful and more attractive. | | | | |
| 4.M.A.C brand helps me feel comfortable. | | | | |
| 5.Im rooting for M.A.C cosmetics because I feel better than I expected. | | | | |
| **PERFORMANCE-RELATED TACTIC** | | | | |
| 1.The M.A.C products are safe from lead hazards. | | | | |
| 2.The M.A.C are made to last longer. | | | | |
| 3.The M.A.C products is a reliable product. | | | | |
| 4.I would definitely buy M.A.C because of its good customer service. | | | | |
| 5.I would definitely buy M.A.C products because it is tested and proven. | | | | |
| **NORMATIVE TACTIC** | | | | |
| 1.I am influenced by their social media advertisement. | | | | |
| 2.I am influenced by their celebrity endorser. | | | | |
| 3.My friends are telling me to purchase M.A.C beauty care products because it is a high-end and a famous brand. | | | | |

| | | | | |
|---|---|---|---|---|
| 4.M.A.C cosmetics are highly recommended, because they are the best products. | | | | |
| 5.I listen to the opinions of my friends before I purchase M.A.C brands. | | | | |
| **HABIT TACTIC** | | | | |
| 1.I often buy M.A.C cosmetics if there is a new release product. | | | | |
| 2.I often buy M.A.C to satisfy my needs. | | | | |
| 3.I often read information about M.A.C if there is a new product. | | | | |
| 4.I often buy M.A.C items every time I pass by at malls. | | | | |
| 5.I often buy M.A.C products weekly or monthly. | | | | |
| **BRAND LOYALTY** | | | | |
| 1.I have been using M.A.C for years and never wanted any brand. | | | | |
| 2.I buy M.A.C products because of a strong preference for it. | | | | |
| 3.I buy M.A.C products because of their strong commitment customers. | | | | |
