Greenwood Resources: A Global Sustainable Venture in the Making

Low-Effort Word-Spinning — Surface Synonym Swapping & Structural Preservation

Background of the Case

Greenwood Resources was established in 1998 by Jeff Nuss and carved a niche in the market by combining varietal forestry with intensive plantation management. Jeff Nuss's vision was to create a product that would last a lifetime; his background in bio resources gave him the tools and knowledge to select a product that would generate a competitive advantage. No other company was investing in sustainable forestry, which is why he took the chance and strongly believed the market for sustainable forestry would one day flourish. Additionally, Jeff studied the market and knew how costly and time-consuming sustainable forestry was; he knew nobody was going to invest time or money in this industry. According to Dess et al. (2018), demand conditions are products that are requested by consumers driving other companies to create or improve innovative products, advanced products, or services.

Greenwood Resources is a leading environmental tree plantation industry that specializes in asset management through high yield tree plantations. Greenwood struggled for over 10 years to produce high profits throughout its early years of operation. An investment opportunity opened doors for the company, and they established Green China Forestry Company.

The International Strategy of Greenwood Resources is to develop their products to appeal to global markets. China had a high yield potential for poplar tree farming. Therefore, excessive logging and deforestation made the tree industry more appealing to nations that were struggling with the demand in trees.

Main Problem

This study attempts to find evidence of Greenwood Resources: A Global Sustainable Venture in the Making. Moreover, clarity of the problem statement is important to maintain, in order to prevent misunderstanding between the shareholders and investors. All in all, the problem statement gives a direction to the organization in identifying the right solution path and development of solution sets in order to address the current issues that are harming the organizational performance or productivity.

The large poplar plantation in Oregon turned out to be complicated because of the differences in company strategies and culturally embedded mindsets. It must consider the disadvantages of the two particular jobs. Greenwood needs to continue

and guarantee its sustainability but then, they also recognized that the firm should show some improvement to its key investor located in China. Jeff along with his top management team must determine whether they need to recommend investing in one or both tasks.

Furthermore, Greenwood Resources have managerial issues such as:

- Lack of proper documentation of plant areas
- Weak intellectual property protection
- Insufficient investment funds
- Social and Political risks
- Cultural challenge
- Economic Recession

Alternative Courses of Action

Solution 1: Strategic Management

Advantage: In strategic management, it includes the strategies of every division and a strategy as a whole. Because critical decision making is essential, in such manner, they would know if it is advisable for them to invest in one of both tasks.

Disadvantage: They might lose the opportunity to expand and attract capital investors for not investing at the big poplar plantation.

Solution 2: Compliance to Legal Documents

Advantage: Compliance with laws to the land and forest resources are clearly stated and legally established.

Disadvantage: If this happens, the managerial issue may arise and might cause problems and disruption to the company.

Solution 3: Work on Capital Investment

Advantage: Procurement of funds to sustain finances and avoids insufficiency; moreover it helps the company estimate which investment would yield the possible return.

Disadvantage: The company's operating cash flow might not be enough to cover anticipated costs. The company might resort to outside financing to cover up the internal shortfall.

Recommendation

With the above analysis, we therefore recommend alternative courses of action

numbers 1 and 3. These two actions propose strategic management and work on capital investment. Since thorough decision making must be made among the CEO and top management, for them to effectively ensure their sustainability. In addition, working on capital investment is essential for the company to operate simultaneously with no insufficiency of funds.

Mission

The mission of Greenwood Conservancy is to establish a refuge that will focus on the protection and improvement of existing habitat by maintaining a mix of open fields, woodlands and marshes.

The refuge will ensure the protection of indigenous wildlife, waterfowl, songbirds, and birds of prey; and will support the growth of native trees, plants and wildflowers. It will permanently safeguard a large tract of land from development and will serve as an educational, visual and environmental resource.

Greenwood Resources' Technology is one of the most significant ways of being competitive in the highly competitive market arena. Not only this, it drives globalization; the factors include environmental and ecological aspects, and available services as well as products. An organization should innovate and be compatible with the technologies.
