Brand Experience to Consumer Purchase Intention of Baby Charm Marquee Mall Branch

Jazmine L. Dungca / Benedicta M. Felicia / John Allain O. Salonga / Rosario L. Tiatco

Abstract

The study investigated the Relationship of Brand Experience to Customer Purchase Intention at Baby Charm Marquee Mall Branch. The research determines if Brand Experience and Customer Purchasing Intention have a powerful relationship based on Sensory, Affective, Behavioral and Intellectual. Mean rating table was to rate the responses of 292 respondents on the self-made questionnaire distributed on the actual survey. The results obtained using mean rating and Pearson R Correlation as a statistical tool. The results revealed that all Four variables related to brand experience namely Sensory, Affective, Behavioral and Intellectual all gained a rating of strongly agree. Therefore, the researchers conclude that brand experience has a strong positive correlation to consumer purchase intention. The researchers recommend that Baby Charm should improve it's Brand Experience as it affects Consumer Purchase Intention. Based on the results revealed that Factors of Brand Experience has a correlation to Consumer Purchase Intention.

(Keywords: Brand Experience, Sensory, Affective, Behavioral, Intellectual, Consumer Purchase Intention)

Introduction and Review of Related Literature

According to Rouse (2018), brand involvement may be a sort of experiential promoting that joins an all-encompassing set of conditions made by a company to impact the feeling of a client approximately a specific item or company title. Through a combination of different modes, a buyer employment to interact with a brand, companies endeavor to form a common air of goodwill, constancy or believe to form an affiliation between the brand and a particular require or feeling. Schmidt(2019) said that brand involvement may be a work of promoting that coordinating a comprehensive collection of circumstances to evoke feelings and positive sentiments from shoppers. Brand encounter shapes the way clients feel towards an item or commerce. It makes a difference construct buyer mindfulness and makes brand-faithful clients. An effective case of brand involvement is when a company embeds itself into a critical life minute or occasion of their target advertise.

Brand Experience will help the businesses to earn the loyalty of consumers. The company will have a result of feedback from the consumer. According to Ramayah (2018), brand experiences are essential in building intention to purchase and accomplishing business sustainability and findings showed that different types of brand experience affect customer purchase intention. And itis one of the foremost promising concepts to rise in buyer inquire about over the final decade. Be that as it may, not at all like other brand-related concepts, it has frequently been considered certainly, not unequivocally, in utilization flow. (Solerio, 2019)

Cleff, 2014 stated that the dimensions of brand experience are positively affecting the consumer purchase intention: the sensory, affective, behavioral, and intellectual.

Consumer purchase intention means the willingness of a customer to buy a certain product or a certain service. A dependent variable that depends on several external and internal factor. Brand experience was represented as a holistic concept with sensory, affective, behavioral and intellectual aspects through consumer purchase intention. (Tang, 2015)

According to Latha (2016), the purchase intentions of parents have something to do with the needs of their babies in which they are always concerned with getting the best goods in the marketplace and doing everything so that their child is sound and safe. Also, according to Ebrahim (2016), they seek out brands that create experiences; that intrigue them in a sensorial, emotional and creative way. Moreover, it reveals that the effect on repurchasing intention of the brand, trust is more significant than its effect on commitment (Aydin, 2014). Brand experiences of the organized retail outlets are successful to bring a satisfaction in customer's mind and influences the customers purchase intentions during shopping. (Sen, 2017)

Sensory

The factor depends on how employees serve its customers that affect purchase intention (Iglesias, 2019). In other words, it can influence the purchase intention of a consumer on a particular brand (Moreira, 2017). Consequently, it shows that sensory is one of the powerful tools to increase the level of purchase intention. The five senses have made a stronger emotional connection with the consumer and drive preference to their brand (Peter, 2018). Therefore, the manager should create a personalized approach such as consumer-brand relationship to give a memorable brand experience, which will result in repeat business (Xie, 2019). In additionNdaaba (2016) asserts that the sense

measurement in brand involvement includes aBodily and affectionate impression of a customer, whichis fascinating to the Five senses: sound, sight, smell, taste and touch.

Affective

However, Stimulus occurs in “feel".to the consumer's sensations and feelings where "think" interests the problem-solving involvement So, the affective variables such as satisfaction and commitment are related to purchasing intention as they satisfied the needs and wants of their customers and it may result in customer purchase intention. Therefore, the affective factor has a significant role (Bang, 2015).

According to Wagner (2017), affective creates positive emotions and increases impulsive purchases and store loyalty. Qader (2017), provides evidence that the affective dimension positively influences purchase intention because the customer get attached on the brand due to its satisfying performance and its promise, thus, the effect is the repeat business. Affective intentions can be identified and visualized which may help manufacturers to improve their products and services. Furthermore, affective information is also useful for product recommendations. (Tsui, 2018) Thus, affective commitment can influence consumer purchase intentions. (Quero,2015)

Behavioral

More so, Kompella, (2019) argued that the behavioral dimension could be called the automatic detection of human feelings and emotions using the habit of purchase in a specific brand. Fahim (2019) also stated that as the societal identity can help to explain behavioral differences across groups, an individual's social identity provides a set of rules that govern team behavior. A significant facet of the social identity is its stereotypes; the psychological, psychological and bodily traits ascribed to a normal part of a social

gather.After aset of characteristics are utilized to depict a gather, these characteristics impact the behavior of people that are associated with the group. As such stereotypes are somewhat exaggerated, stereotypes predominately highlight the differences between classes. For instance, negative perceptions can be generated by a negative stereotype leading people about the self (Zelinsky, 2019).

A person's social character gives a set of rules that oversee gather conduct, as such social character can offer assistance to clarify behavioral contrasts over bunches. A critical angle of one's social character is its generalizations; the physical, mental and mental characteristics ascribed to a normal part of a given social gather. Once a set of characteristics are utilized to portray a social gather, those characteristics impact the conduct of individuals who are related with the gather. Generalizations predominately highlight the biggest contrasts between bunches as such numerous generalizations are overstated. For occasion, a negative generalization can produce negative discernments around one's self, driving individuals to perform more awful than their capacities would recommend. Generalization risk is particularly predominant in populaces that endure from segregation (Vecci, 2019). And influence trust on purchase intention leads to behavioral dimension. (Wang, 2015)

Intellectual

According to Li (2018), Intellectual dimension is all about consideration, stimulation of curiosity, analytical and creative thinking. Also, the findings revealed that clients useful brand experience and intellectual brand encounter elaborations are elicited concurrently in the formation of brand recognition quality and purchase intention (Ahn, 2018).

Thus, (Willems, 2019) believes that the intellectual dimension may be useful for new managers who aim to acquire purchase intentions towards their brands and positive consumer attitudes and who are in search of bringing their brands to life. Also, intellectual dimension talks abouta customer's imaginative considering and the ways of duplicating the things in a diverse way (Pandowo, 2016).

(Roy (2017) said that intellectual capital significantly impacts the success and survival of a company. At the same point brand experience will test the loyalty of every consumer in different company. Baby charm store is a merchandising business because it purchases finished products and resells them to consumers. It is a complete one-stop-shop baby store that provide mothers with all their baby's needs from layette, bed linens, feeding, infant wear, footwear, health and grooming, baby safety, furniture, and toys. They offer high-quality products, value for the customer's money and a wide range of great selections and shopping convenience with expert advice from their well-trained sales team. In short, they give complete, best value deals, quality product and services. Baby Charm has established 3 stores nation-wide.

Conceptual Framework

INDEPENDENT VARIABLE DEPENDENT VARIABLE

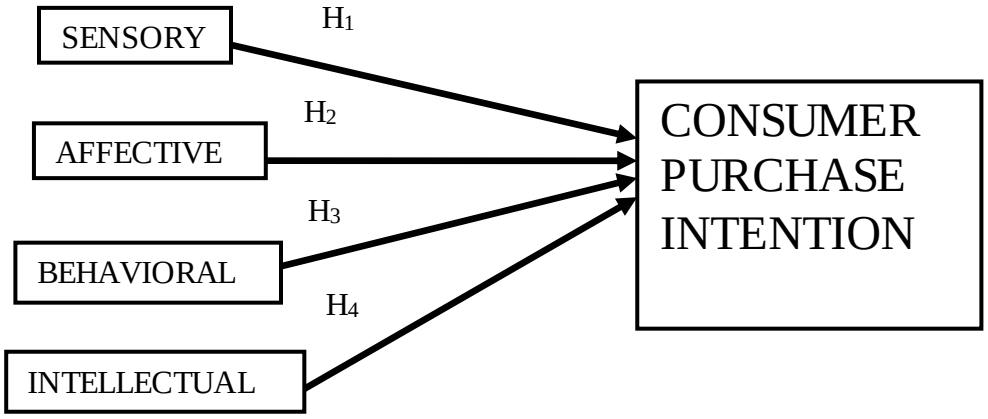

Figure 1. Conceptual Framework

This research illustrates the relationship of Brand Experience using thefour measurements: tangible, emotional, behavioral and mental to Consumer Purchase Intention at Baby Charm. Result of the study will determine whether Brand Experience has a significant relationship to Purchase Intention.

Statement of the Problem

The researchers aim to identify the Relationship of Brand Experience to Consumer Purchase Intention, specifically the study considered the following question:

1) How may the factors of Brand Experience of respondents be described in terms of:

   a. Sensory

   b. Affective

   c. Behavioral

   d. Intellectual

2) How may consumer purchase intension be described in general?

3) Is there a significant relationship between the factors of Brand Experience and Consumer Purchase Intention?

Null Hypothesis:

H_1: There is no significant relationship between Sensory and Consumer purchase intention.

H_2: There is no significant relationship between Affective and Consumer purchase intention.

H_3: There is no significant relationship between Behavioural and Consumer purchase intention.

H_4: There is no significant relationship between Intellectual and Consumer purchase intention.

Significance of the Study:

The study of Relationship of Brand Experience to Consumer Purchase Intention at Baby Charm Marquee Mall aims to show the perception of the consumer and important priorities when it comes to brand experience and starting a baby product business. This research paper is beneficial to Baby Charm, Aspiring Entrepreneurs, Current Researchers, Future Researchers and Students since it talks the world of Business and Marketing.

To Baby Charm:

The research will help the company employ powerful strategies to understand how brand experience can affect the purchase intention of its customers. This gives the company a guide to stay ahead in the competition. With this, as a form of business analysis, it can reduce costs and layout of alternatives that concentrate on the needs and wants of their target readers.

To Aspiring Entrepreneurs:

This research will help aspiring entrepreneurs as an eye-opening tool to thoroughly check everything to the smallest detail that may exist before thinking of starting business. This research attempts to explain the process of business by answering the questions that start with how, why, what, when and who. This will also help aspiring entrepreneurs make their business proposal feasible be it a solo, partnership or corporation.

Current Researchers:

This research will help them gain knowledge from understanding business procedures and may provide the best product knowledge for the consumers if they intend to enter the corporate world.

Future Researchers:

They can use this study as their reference in conducting their research paper. This may help provide them an essential tool in understanding the current happenings in the market.

To Students:

This study may help them have a better understanding with the latest trend in the market. It may also have a significant impact whether the old and new can and cannot be used for marketing. This may also help how they will react with the current situation in the market. Details of findings from this research can be essential in studying the impact of business marketing as well as business operational procedures on a day to day basis. It is like attending to a baby; one has to take good care of the business, especially in the first year. Challenges will be experienced during the different stages but with continues hard work, achievement may be reached within the years. Also, there is always room for mistakes and be ready to face them as they are part of business ups and downs.

Scope and Limitations:

This research paper focuses on the relationship between brand experience and consumer purchase intention. The study is limited Baby Charm Marquee Mall. This research aims to explain if the essential of customer needs regarding brand experience. The participants of this study will be 292 mothers buying at Baby Charm.

Methods

Research Design

This research will use descriptive method to describe information that will help understand the relationship of the four factors, which are sensory, affective, intellectual and behavioral and to their consumer purchase intention. The descriptive method is structured in the form of a survey and data collection instruments are fitted to extract experiences from predetermined response classifications. Quantitative strategies emphasize objective estimations and the factual, scientific, or numerical examination of information collected through surveys, surveys, and studies, or by controlling pre-existing measurable information utilizing computational procedures.Correlational inquire about could be a sort of non-experimental investigate strategy, in which an analyst measures two factors, gets it and survey the factual relationship between them with no impact from any unessential variable. The respondents' survey results will be summarized, compared, and generalized. The researchers wish to find out consistency, preciseness and reliability to data collected from the survey.

Participants of the Study:

A mother's love needs to be given unconditionally to establish trust and a firm foundation of emotional intimacy in a child's life. (Savage, 2007) Thus, mothers are popular target market because they generally have greater need for furniture, toys and baby supplies. (Lester,2008)

The participants of the study are 292 mothers buying at Baby Charm, Marquee Mall. The researchers used the respondents as a source for the formulation of the number of population of the target market Raosoft Calculator. According to the census of

PSA,the total population of mothers in Angeles City Pampanga is 83,603.The Raosoft test calculator is essentially a computer program that essentially calculates or produces the test estimate of a investigate or overview. Evaluating a test measure for a overview, venture or inquire about can be befuddling and baffling, as a result, the Raosoft test estimate calculator offers both test estimate certainty interim calculation and minimize edge of mistakes. Using Raosoft, it automatically computes the total number of respondentsshowing 292 respondents for the chosen target market. In this case researchers provide 292 surveys / questionnaires for the target market.

Research Instrument

The research instrument that has been used in this research paper was a self-made questionnaire. This was the instrument used as a tool to identify how brand experience factors such as sensory, affective, behavioral, and intellectual impact to consumer purchase intention. The researchers used the Likert scale described thus:Strongly Disagree -1, Disagree – 2, Agree – 3 and Strongly Agree – 4.

Data Gathering Procedures

The research created a simple survey questionnaire for the respondents for easy understanding. It was made sure that the questions have an impact or effect, including re effective in describing the factors from the said topic, the brand experience. Time and effort will be spent during the distribution of questionnaires and gathering and processing data. The research conducted pilot testing, for a week to test the reliability of the questionnaire before conducting the actual survey.

Data Processing and Analysis Procedure

Likert scale is used to describe the following range: Strongly Disagree-1, Disagree – 2, Agree – 3 and Strongly Agree – 4. To analyze the factors level for this study to identify if brand experience with consumer purchase intention. Mean Rating shows the rating of the tallied answers through the surveyed questionnaires to compute result of brand experience and how it affects Customer Purchase Intention.

Mean Rating Equivalent		
Value Scale	Mean Range	Interpretation
4	3.25 – 4.00	Strongly Agree
3	2.50 – 3.24	Agree
2	1.75 – 2.49	Disagree
1	1.00 – 1. 74	Strongly Disagree

Table 1. Mean Rating Scale

After tallying, the gathered data will undergo statistical procedure. Mean Rating and Correlation are statistical tools employed here to see if each factor of tallied result affect Brand Experience the Consumer Purchase Intention.

r value =	
1.00	Perfect Correlation
+.80 < +1.0	Very Strong Positive Correlation
+.60 < +.80	Strong Positive Correlation
+.50 < +.60	Moderate Positive Correlation
+.20 < +.50	Weak Positive Correlation
+.01 < +.20	Very Weak Positive Correlation
0	No Correlation

Table 2. Strength of Correlation

RESULT AND DISCUSSION

Table 3 shows that survey item "I heard good feedbacks about Baby Charm" has the lowest mean rating of 3.59 with a descriptive rating of "Strongly Agree". Meanwhile, the statement "Baby Charm offers a wide selection of products" has the highest mean rating of 3.69 with a descriptive rating of "Strongly Agree". On the average, Sensory gained a mean rating of 3.6315 with a descriptive rating of "Strongly Agree".

Sensory	Mean Rating	Rank	Descriptive Rating
Baby Charm offers a wide selection of products	3.69	1	Strongly Agree
I heard good feedbacks about Baby Charm	3.59	5	Strongly Agree
Baby Charm's store branches are accessible	3.60	4	Strongly Agree
Baby Charm product design are suitable for baby needs	3.68	2	Strongly Agree
Baby Charm products passed the quality for product safety	3.61	3	Strongly Agree
OVERALL MEAN RATING	3.6315		Strongly Agree

Table 3 Mean Rating for Brand Experience – Sensory

Table 4 shows that Affective, with the highest mean rating of 3.76 with a descriptive rating of "Strongly Agree" for "Baby Charm's product are easy to use" and "Baby Charm takes good care of their customers" has the lowest mean rating of 3.53 with a descriptive rating of "Strongly Agree. It shows that Affective factor has an overall mean rating of 3.6267 with a descriptive rating of "Strongly Agree".

Affective	Mean Rating	Rank	Descriptive Rating
Baby Charm's product are easy to use	3.76	1	Strongly Agree
Baby Charm takes good care of their customers	3.53	5	Strongly Agree
Baby Charm products is the name I can trust for all my baby needs	3.58	4	Strongly Agree
I trust what the loyal consumer's say about baby Charm	3.66	2	Strongly Agree
I am satisfied with Baby Charm products	3.60	3	Strongly Agree
OVERALL MEAN RATING	3.6267		Strongly Agree

Table 4 Mean Rating for Brand Experience – Affective

Table 5 shows that "Baby Charm never disappoints me" have the lowest mean rating of 3.50 and "Baby Charm products are safe for my baby" got the highest mean rating of 3.70. Therefore, Behavioral factor shows an overall mean rating 3.5952, from the highest to the lowest including the overall mean rating they all got a descriptive rating of "Strongly Agree:

Behavioral	Mean Rating	Rank	Descriptive Rating
Baby Charm products meet my demand and expectation	3.62	2	Strongly Agree
Baby Charm products live up to its claims and promises	3.55	4	Strongly Agree
Baby Charm products give me confidence for my baby	3.62	3	Strongly Agree
Baby Charm never disappoints me	3.50	5	Strongly Agree
Baby Charm products are safe for my baby	3.70	1	Strongly Agree
OVERALL MEAN RATING	3.5952		Strongly Agree

Table 5 Mean Rating for Brand Experience – Behavioral

Table 6 shows that Intellectual factor gained a descriptive rating of "Strongly Agree" from the highest to the lowest including the overall mean rating. It shows that "Baby Charm products are cheaper than product from other stores" has the highest mean rating of 3.62 and "Baby Charm products comply to International standard got the lowest mean rating of 3.45. Thus, Intellectual factor got an overall mean rating of 3.5596.

Intellectual	**Mean Rating**	**Rank**	**Descriptive Rating**
Baby Charm products comply to International standard	3.45	5	Strongly Agree
Baby Charm product is eco-friendly	3.59	2	Strongly Agree
Baby Charm products are cheaper than products from other stores	3.62	1	Strongly Agree
Baby Charm products are highly recognized by consumer's organization	3.57	4	Strongly Agree
Baby Charm is consistent in selling high quality products	3.58	3	Strongly Agree
OVERALL MEAN RATING	3.5596		Strongly Agree

Table 6 Mean Rating for Brand Experience – Intellectual

Table 7 shows that the item "Company (Baby Charm) regularly update me about their new products and their latest promo" has the lowest mean rating of 3.25 with a descriptive rating of "Strongly Agree" and the statement "Baby Charm is a trusted brand" has the highest mean rating of 3.60 with a descriptive rating of "Strongly Agree". Therefore, Purchase Intention gained a mean rating of 3.3719 with a descriptive rating of "Strongly Agree".

Purchase Intention	Mean Rating	Rank	Descriptive Rating
Products from Baby Charm usually attracts me to buy and purchase	3.50	2	Strongly Agree
My friends and relatives recommend me to purchase Baby Charm products	3.25	4	Strongly Agree
I am regular customer at Baby Charm products	3.27	3	Strongly Agree
Company (Baby Charm) regularly update me about their new products and their latest promo	3.25	5	Strongly Agree
Baby Charm is a trusted brand	3.60	1	Strongly Agree
OVERALL MEAN RATING	3.3719		Strongly Agree

Table 7 Mean Rating for Brand Experience – Purchase Intention

Table 8 shown the test of relationship performed using the Pearson Product Moment R Correlation to validate the hypotheses of the study. The analyses include the determination of the significance and strength of relationship between variables and consumer purchase intentions. Data revealed that Sensory, a factor of Brand experience has significant relationship to Consumer Purchase Intentions at a significance level of 0.000 (p-value < 0.05). Hence, H1 is rejected. The relationship between this independent variable and dependent can be described as "strong positive correlation" at r-value of .600. Furthermore, Data revealed that Affective, a factor of Brand experience has significant relationship to Consumer Purchase Intentions at a significance level of 0.000 (p-value < 0.05). Hence, H2 is rejected. The relationship between this independent variable and dependent can be described as "strong positive correlation" at R-value of .623. In addition, Data revealed that Behavioral, a factor of Brand experience has significant relationship to Consumer Purchase Intentions at a significance level of 0.000 (p-value < 0.05). Hence, H3 is rejected. The relationship between this independent variable and dependent can be described as "strong positive correlation" at R-value of .708. Moreover. Data revealed that Intellectual, a factor of Brand experience has significant relationship to Consumer Purchase Intentions at a significance level of 0.000 (p-value < 0.05). Hence, H4 is rejected. The relationship between this independent variable and dependent can be described as "strong positive correlation" at R-value of .684.

Table 8 Pearson Correlation Results

Hypotheses	r	P-Value	Interpretation	Decision
H_1: There is no significant relationship between Sensory and Consumer purchase intention.	.600**	.000	Strong Positive Correlation	RejectH_1
H_2: There is no significant relationship between Affective and Consumer purchase intention	.623**	.000	Strong Positive Correlation	RejectH_2
H_3: There is no significant relationship between Behavioural and Consumer purchase intention.	.708**	.000	Strong Positive Correlation	RejectH_3
H_4: There is no significant relationship between Intellectual and Consumer purchase intention.	.684**	.000	Strong Positive Correlation	RejectH_4

***p-value <.01 is significant*

Conclusion

According to Rouse (2018),brand involvement may be a sort of experiential showcasing that consolidates an all-encompassing set of conditions made by a company to impact the feeling of a client almost a specific item or company title. Through a combination of different modes, a buyer employment to interact with a brand, companies endeavor to form a common air of goodwill, steadfastness or believe to make an affiliation between the brand and a particular require or feeling.In this research, the researchers aim to know the impact of brand experience to consumer purchase intention. The researchers arrived with the following conclusion for each factor under Brand Experience:

Sensory, this factorgained a mean rating of 3.6315 with a descriptive rating of "Strongly Agree". Thus "I heard good feedbacks about Baby Charm" has the lowest mean rating of 3.59 and in the statement "Baby Charm offers a wide selection of products" has the highest mean rating of 3.69 with a descriptive rating of "Strongly Agree".

Affective, this factor gained a mean rating of 3.6267 with a descriptive rating of "Strongly Agree" with the highest mean rating of 3.76 with a with the statement of "Baby Charm's product are easy to use" and shows that"Baby Charm takes good care of their customers" has the lowest mean rating of 3.53.

Behavioral, this factor gained a mean rating of 3.5952 with a descriptive rating "Strongly Agree". "Baby Charm never disappoints me" has the lowest mean rating of 3.50 and "Baby Charm products are safe for my baby" got the highest mean rating of 3.70.

Intellectual, this factor gained a mean rating of 3.5596 with a descriptive rating "Strongly Agree". "Baby Charm products comply to International standard got the lowest mean rating of 3.45 and "Baby Charm products are cheaper than product from other stores" has the highest mean rating of 3.62.

Overall, the hypothesis has been rejected. Therefore, there is a significant relationship between Brand Experience and Consumer Purchase Intention.

Recommendation

Being a known brand in the industry, Baby Charm continuously sells affordable baby products.

For Sensory, Baby Charm should be aware with the feedbacks / reviews of their consumer. The researchers recommend them to have an active Social Media tool where they can communicate with their consumer and they can give assurance to their consumers by entertaining them with their feedbacks/reviews and inquiries.

For Affective, Baby Charm should hire eemployees' whose personality fits within their culture and reflects their company's values. Employees are asset to the company, they are responsible for meeting the needs and wants of the consumer.

For Behavioral, Baby Charm should make sure about the quality of their products and always be aware with the behaviour of their consumers on what is trend with the market. Being updated with market trends is very important to this generation.

For Intellectual, Baby Charm should consider introducing product and monthly basis. Baby Charm should make sure that their product passed license safety standards.

DEFINITION OF TERMS

Brand – a type of product manufactured by a particular company under a particular name. It is also the identity of the product for consumer to be familiarize with it.

Experience – practical contact with and observation of facts or events.

Sensory – relating to sensation or the physical senses transmitted or perceived by the senses.

Affective – describes something that has been influenced by emotions, is a result of emotions, or expresses emotion.

Intellectual – means involving a person's ability to think and to understand ideas and information.

Behavioural – an action that is observable and measurable.

Purchase intention – the preference of consumer to buy the product or service. In other words, another aspect that the consumer will purchase a product after evaluation.

Letter for Actual Survey

Letter of request for actual survey

January 28, 2020

To whom it may concern

We the 4th year student of System Plus College Foundation are currently undertaking the subject Marketing Research. The output of this semester's subject is the 1st part of the 2 part requirements which is ultimately a requirement for graduation by next semester.

We would like to seek for your participation in our research by becoming the subject company for our research. We would be needing your assistance for the following:

a. Permission to administer survey to most of the customers
b. Other related information

We are looking forward to your positive response towards this request. Thank you very much and may God bless you.

Respectfully,

Dungca, Jazmine
Felicia, Benedicta
Salonga John Allain
Tiatco, Rosario
